EDUCATION

University of Washington — Seattle, WA
Master of Science in Computational Linguistics — *Sep. 2025 – Present*

Hankuk University of Foreign Studies, HUFS — Seoul, South Korea
Bachelor of Arts in Linguistics & Cognitive Science — *Mar. 2018 – Feb. 2024*
Bachelor of Language Science in Artificial Intelligence (Double Major)
Advisor: Jeesun Nam

RESEARCH EXPERIENCE

LT4CPR, UW — Seattle, WA
Research Assistant, Supervisor: Prof. Fei Xia — *Jun. 2026 – Present*

- Developed evaluation methods for comparing LLM-generated crisis situation reports with reference reports, focusing on semantic content preservation and hierarchical discourse alignment
- Designed document-, section-, subsection-, and bullet-level evaluation pipelines combining lexical and semantic similarity metrics with bipartite matching for fine-grained content alignment

DICORA Computational Linguistics Lab, HUFS — Seongnam, South Korea
Undergraduate Research Intern, Supervisor: Prof. Jeesun Nam — *Jan. 2022 – Sep. 2022*

- Conducted corpus-based research on Korean-language data for chatbot NLU in financial-news sentiment analysis, focusing on Korean-specific morphosyntactic patterns involving verbal endings, case particles, and object expressions
- Contributed to corpus construction and linguistic annotation based on these patterns for chatbot training

PUBLICATIONS

[1] *Overview of the LT4CPR 2026 Shared Task: Generating Situation Reports from Social Media Messages.* Fei Xia, Haotian Zhu, **Yunwoo Lee**, Eitan Grenev, Allison K. Burton, Yingzhe Fan, William D. Lewis, Antonis Anastasopoulos, and Belu Ticona.
AACL-IJCNLP Workshop on Language Technologies for Crisis Preparedness and Response (LT4CPR),
2026. (Accepted)

[2] *Relational Grounding Failures in Zero-Shot Cross-Lingual Dialogue Summarization with Small Language Models.* **Yunwoo Lee**, Ziwa Li, and Jennifer Huang. *EMNLP Workshop on Grounding Language Models: Learning Faithfully and Efficiently (GroundLM),* 2026. (Accepted)

INDUSTRY EXPERIENCE

Korea Electronics Technology Institute (KETI) — Seongnam, South Korea
Researcher, Language Team - AIRC (Artificial Intelligence Research Center) — *Sep. 2024 – Jun. 2025*

- Developed trustworthiness benchmarks for Korean LLMs (hallucination, reliability, sociocultural bias) through prompt design, rubrics, and failure-mode analysis
- Validated a Korean multimodal dialogue dataset by aligning utterance-level pragmatic functions with nonverbal cue labels to improve human–AI interaction robustness

NCSOFT Seongnam, South Korea
Language AI Researcher, Language Data Team *Mar. 2024 – Sep. 2024*

- Led AI Red Team initiatives, creating robust testing protocols and diverse conversational datasets to identify and mitigate ethical and safety risks in language models
- Categorized language model vulnerabilities into single-turn versus multi-turn threats by identifying discourse-level risks, including anaphoric references that are undetectable within a single turn

SK TELECOM Seoul, South Korea
Linguistic Data Analyst, AI Technology Unit *Feb. 2023 – Jun. 2023*

- Led human-centric annotation to ensure sociolinguistic coverage (honorific levels, informal slang, code-mixing) in conversational training data
- Created a linguistically grounded ambiguity taxonomy and applied it to normalize Korean queries and improve chatbot robustness

AWARDS AND HONORS

Graduate Student Conference Presentation Award, UW 2026
CLMS Scholarship, UW ($14,500) 2025
Departmental Scholarship, HUFS 2021, 2023
Outstanding Undergraduate Thesis Award, HUFS 2022
Best Composition Award, HUFS 2018
Student Leadership Scholarship, HUFS 2018
National Merit Scholarship 2018

PROFESSIONAL SERVICE

[1] Reviewer, **VLM4RWD 2026 Workshop**, NeurIPS 2026

RESEARCH PROJECTS

Learning Linguistic Generalizations Across Languages from Indirect Evidence: A Filtered-Corpus Study of English and Korean
M.S. Thesis, University of Washington *Oct. 2026 – Present*

- Investigating cross-linguistic grammatical generalization in language models through bidirectional English–Korean filtered-corpus training experiments.
- Evaluating whether construction-specific evidence from one language facilitates generalization to unseen grammatical constructions in another language using minimal-pair grammaticality judgments.

Linguistic Pattern Analysis for Financial Sentiment: Attribute-Verb Relationships in Stock Market Articles
B.A. Thesis, HUFS *Sep. 2022 – Dec. 2022*

- Modeled semantic constraints between attribute nouns (e.g., interest rates, costs) and directional predicates (rise/fall) to capture context-dependent polarity shifts in financial discourse
- Recognized with the Outstanding Undergraduate Thesis Award

LANGUAGES AND TECHNICAL SKILLS

Programming	Python, R, C++, SQL, Java
ML/NLP	PyTorch, NLTK
Tools	Git, Linux/CLI
Typesetting	LaTeX
Languages	Korean (native), English (fluent)
